

STOP THE CLOCK

WITH PRECISION TIME

Introducing the upgraded Precision Time System PTS-900E-K, which combines several state of the art technologies to provide a whole new level of performance of game clock operation.

The PTS-900E-K uses current digital sampling technology to customize each belt pack to the game official's whistle; providing a significantly improved level of performance in stopping the clock when the official makes a call.

In addition, the PTS-900E-K provides a comprehensive auditing capability of each clock event throughout the game. The PTS-900E-K specifically for the EuroLeague has incorporated the K-stats data protocol used in the EuroLeague/ EuroCup competitions to incorporate the game clock timestamp, which generates a log that includes both game time and

shot clock status which can be used in game to correct timing issues.

Other Features of the PTS-900E-K system include:

- Audio Start/Stop Clock Alert in Base Station for timekeepers
- Capability to manage up to eight unique referee belt packs (previously only five)
- 255 easy access radio channels to handle dynamic RF environments
- 7" touchscreen with improved in game diagnostics
- USB ports for saving game files onto memory stick
- Additional internal 16GB memory card for storing game files
- Streamlined Wi-Fi access for software updates and game file retrieval
